

Second, you can trust Siwel to deliver the right solution because of our background as an IBM Premier Partner. We specialize in IBM solutions and our engineers and technicians are EXAct and Blade certified, meaning you get the best technical and implementation support available.

The System x Advantage

Scale and Simplify

Data centers are digging out from the old conventional wisdom of one application/one box IT deployment. Their administrators are finding that consolidating workloads onto fewer platforms drives out cost and complexity through simplified management and system optimization. IBM System x can help maximize your IT infrastructure to scale quickly, easily and inexpensively. Their simplicity and scalability let you confidently execute your business objectives and stretch your IT budget. System x technology also gives you the flexibility to cost-effectively increase capacity on demand.

System x relies on an intelligent system design that combines multiple layers of redundancy and memory protection with advanced availability tools. With the ability to scale up to 32 processors on rack servers or the ability to add blades on demand, you get a dynamic and scalable infrastructure that you can grow incrementally according to your business needs.

Energy Conservation

Managing energy is a growing concern in data centers around the world. The increasing numbers of servers and the incremental heat they produce require more energy to operate and cool. With energy costs on the rise, the expense to a data center can be staggering.

System x and BladeCenter servers from IBM can help you cut costs with technologies that not only increase performance per watt, but also help you budget, plan and control your power usage. By consolidating and virtualizing on IBM System x and BladeCenter servers, you can increase the utilization of your hardware and decrease the number of physical assets you need to manage. This translates into real dollar savings through better energy conservation and optimized IT resource usage.

Consultants First

Siwel started as a consulting firm. Accordingly, we carefully look at our customers' business problems before we recommend solutions.

Siwel specializes in IBM solutions, including System x. We've been implementing System x since it was introduced more than ten years ago. In that time, we've been among the biggest innovators in deploying solutions that can tackle the most demanding workloads while helping you manage complexity and control costs in your data center.
